MATERIAL SAFETY DATA SHEET

Section 1  Identification

Product name(s): Portland Cement  
Product code: Type I, III, Product, Bantox, Hardie  
Trade names and synonyms: Cement, Hydraulic cement, Portland cement silicate  
Chemical family: Calcium compounds. Calcium silicate compounds and other calcium compounds containing iron and aluminum make up the majority of this product. Major compounds:  
- \( 3\text{CaO} \cdot \text{SiO}_2 \)  Tricalcium silicate  
- \( 2\text{CaO} \cdot \text{SiO}_2 \)  Dicalcium silicate  
- \( 3\text{CaO} \cdot \text{Al}_2\text{O}_3 \)  Tricalcium aluminate  
- \( 4\text{CaO} \cdot \text{Al}_2\text{O}_3 \cdot \text{Fe}_2\text{O}_3 \)  Tetracalcium aluminoferrite  
- \( \text{CaSO}_4 \cdot 2\text{H}_2\text{O} \)  Calcium sulfate dihydrate or Gypsum  

Product use: Building materials, construction, a basic ingredient of concrete.

Company Identification:  
Illinois Cement  
1601 Rockwell Road  
LaSalle, Illinois 61301  
Phone (815)224-2112, MSDS information M – F, 8 – 4 CST

Emergency Telephone Number:  
(815)224-2112

Section 2  Hazards Identification

EMERGENCY OVERVIEW:  
Portland cement is a gray or white powder. A single short term exposure to the dry powder is not likely to cause serious harm. Danger! Overexposure to wet Portland cement can cause serious, potentially irreversible skin or eye damage in the form of
chemical (caustic) burns, including third degree burns. The same serious injury can occur if wet or moist skin has prolonged exposure to dry Portland cement.

**OSHA HAZARD COMMUNICATION STANDARD:** This material is considered hazardous by OSHA Hazard Communication Standard (29 CFR 1910.1200).

**POTENTIAL HEALTH EFFECTS:**

**Primary Route(s) of Exposure:** skin contact, eye contact, inhalation

**Eye Contact:**

Exposure to dust may cause immediate or delayed irritation or inflammation. Eye contact by larger amounts of dry powder or splashes of wet Portland cement may cause effects ranging from moderate eye irritation to chemical burns and blindness. Such exposures require immediate first aid (see Section 4) and medical attention to prevent significant damage to the eye.

**Skin Contact:**

Contact with cement can cause drying of the skin, irritation, severe chemical burns (third-degree), and dermatitis.

Overexposure to wet cement can cause severe skin damage in the form of chemical burns, including third degree burns. The same severe injury can occur if wet or moist skin is exposed to dry portland cement. Portland cement causes skin burns with little warning; discomfort or pain cannot be relied upon to alert a person to a serious injury. You may not feel pain or the severity of the burn until hours after the exposure.

Portland cement can cause dermatitis by irritation and allergy. Irritant dermatitis is caused by fine particles of cement that abrade the skin mechanically and cause irritation resulting in dermatitis. Portland cement may contain trace amounts of hexavalent chromium. Hexavalent chromium is associated with allergic skin reactions which may appear as contact dermatitis and skin ulcerations. Persons already sensitized may react to their first exposure to cement. Other individuals may develop allergic dermatitis after repeated exposure to cement. The symptoms of allergic reactions may include reddening of the skin, rash, and irritation. Symptoms of chronic exposure to wet cement may include reddening, irritation, and eczematous rashes. Drying, thickening, and cracking of the skin and nails may also occur.

**Inhalation:**

Dusts may irritate the nose, throat, and respiratory tract. Coughing, sneezing, and shortness of breath may occur following exposures in excess of appropriate exposure limits. Prolonged and repeated inhalation of respirable crystalline silica-containing dust in excess of appropriate exposure limits has caused silicosis, fibrosis or scar tissue formations in the lungs.

**Ingestion:**
Although small quantities of dust are not known to be harmful, ingestion of large quantities may cause severe irritation and chemical burns of the mouth, throat, stomach and digestive tract. Do not ingest Portland cement.

**Carcinogenicity:**
Portland cement is not listed as a carcinogen by NTP, OSHA, or IARC.

**MEDICAL CONDITIONS WHICH MAY BE AGGRAVATED BY EXPOSURE**
Contact with wet cement may aggravate existing skin conditions. Inhaling dust may aggravate existing respiratory and lung diseases. Dust may aggravate existing skin and eye conditions. Sensitivity to hexavalent chromium can be aggravated by exposure.

**SECTION 3 COMPOSITION/INFORMATION ON INGREDIENTS**

**SECTION 4 FIRST AID MEASURES**

**SKIN CONTACT**
Heavy exposure to Portland cement dust, we concrete or associated water requires prompt attention. Quickly remove contaminated clothing, shoes, and leather goods (e.g. watchbands, belts). Quickly and gently blot or brush away excess Portland cement. Immediately wash thoroughly with lukewarm, gently flowing water and nonabrasive soap. Seek medical attention for rashes, burns, irritation, dermatitis and prolonged unprotected exposures to wet cement, cement mixtures or liquids from wet cement. Burns should be treated as caustic burns. Portland cement causes skin burns with little warning; discomfort or pain cannot be relied upon to alert a person to a serious injury. You may not feel pain or the severity of the burn until hours after the exposure.

**EYE CONTACT**
Quickly and gently blot or brush Portland cement off the face. Immediately flush the contaminated eye(s) with lukewarm, gently flowing water for 15-20 minutes, while holding the eyelid(s) open. Take care not to rinse contaminated water into the unaffected eye or onto the face. Immediately obtain medical attention.

**INHALATION**
Remove source of contamination or move victim to fresh air. If breathing is difficult, trained personnel should administer emergency oxygen. DO NOT allow victim to move about unnecessarily. Seek medical help if coughing and other symptoms persist. Inhalation of large amounts of Portland cement requires immediate medical attention.

**INGESTION**
NEVER give anything by mouth if victim is rapidly losing consciousness, or is unconscious or convulsing. Have victim rinse mouth thoroughly with water. DO NOT INDUCE VOMITING. Have victim drink 60 to 240 mL (2 to 8 oz. of water.) of water. Immediately obtain medical attention.

**SECTION 5  FIRE-FIGHTING MEASURES**

**EXTINGUISHING MEDIA**
Use extinguishing media appropriate for surrounding fire.

**PROTECTIVE EQUIPMENT AND PRECAUTIONS FOR FIREFIGHTERS**
Although Portland cement poses no fire-related hazards, a self-contained breathing apparatus is recommended to limit exposure to combustion products when fighting any fire.

**SPECIFIC HAZARDS ARISING FROM THE MATERIAL**
Avoid breathing dust. Wet cement is caustic.
Hazardous combustion products: none known

**SECTION 6  ACCIDENTAL RELEASE MEASURES**

**PERSONAL PRECAUTIONS**
Wear appropriate personal protective equipment as described in Section 8. Avoid inhalation of dust and contact with skin.

**METHODS FOR CLEAN-UP**
Carefully shovel dry spilled material and place in suitable container. Avoid generating dust and actions that cause dust to become airborne. Scrape up wet material and place in an appropriate container. Allow the material to dry or solidify before disposal.

**ENVIRONMENTAL PRECAUTIONS**
Do not attempt to wash Portland cement down drains. Prevent spilled materials from inadvertently entering streams, drains or sewers. Large spills to waterways may be hazardous due to alkalinity of the product.

SECTION 7  HANDLING AND STORAGE

HANDLING
Persons using Portland cement should be familiar with its properties and hazards. A key to using the product safely requires the user to recognize that Portland cement reacts chemically with water to produce calcium hydroxide that can cause severe chemical burns.

Avoid actions that generate dust and cause dust to become airborne. Avoid prolonged exposure to dust.

Every attempt should be made to avoid skin and eye contact with cement. Do not get Portland cement inside boots, shoes, or gloves. Do not allow wet, saturated clothing to remain against the skin. Promptly remove clothing and shoes that are dusty or wet with cement fluids and launder/clean before reuse. Wash thoroughly after exposure to dust or wet cement mixtures.

Do not enter a confined space that stores or contains Portland cement unless appropriate procedures and protection are available. Portland cement can build up or adhere to walls of a confined space and release or fall suddenly. Likewise, do not walk on top of Portland cement stored in vessels, bins and silos (engulfment).

STORAGE
Keep Portland cement dry until used.

SPECIFIC USES
Drying Portland cement is hygroscopic—it absorbs water. Portland cement needs water to harden. It will draw water away from any material it contacts—including skin.

Respirable crystalline silica-containing dust may be generated by Portland cement and when hardened product is subjected to mechanical forces, such as sanding, crushing, grinding, cutting.

SECTION 8  EXPOSURE CONTROLS/PERSONAL PROTECTION

EXPOSURE GUIDELINES

Exposure limits:

ENGINEERING CONTROLS
Avoid creating dust and actions that cause dust to become airborne. Use general or local exhaust ventilation as required to maintain exposures below appropriate exposure limits. Use product in well ventilated areas. If ventilation is not adequate, see the respiratory protection recommended below.

PERSONAL PROTECTION
Respiratory Protection:
Ordinarily, a respirator should not be required when handling wet cement. Use NIOSH approved respirators, when an exposure limit is likely to be exceeded, in poorly ventilated areas, or when dust causes discomfort or irritation. Respirator use must comply with applicable MSHA or OSHA standards, which include provisions for a use training program, respirator repair and cleaning, respirator fit testing, and other requirements.

Hand Protection:
Use impervious, waterproof, abrasion-and alkali-resistant gloves. Do not rely on barrier creams in place of impervious gloves. Do not get Portland cement inside gloves.

Eye Protection:
To prevent eye contact wear safety glasses with side shields, safety goggles or face shields when handling dust or wet cement. Dust goggles should be worn in extremely dusty conditions. Wearing contact lenses when working with cement is not recommended.

Skin and Body Protection:
Use impervious, waterproof, abrasion- and alkali-resistant boots and protective long-sleeved and long-legged clothing to protect the skin from contact with wet Portland cement. Where required to reduce foot and ankle exposure, wear impervious boots that are high enough to prevent Portland cement from getting inside them. Do not get Portland cement inside boots, shoes, or gloves. Remove clothing and protective equipment that becomes saturated with cement and immediately wash exposed areas.

GENERAL HYGIENE CONSIDERATIONS:
Clean water should always be readily available for skin and (emergency) eye washing. Periodically wash areas contacted by Portland cement with a pH neutral soap and clean, uncontaminated water. Wash again at the end of the work. If irritation occurs, immediately wash the affected area and seek treatment. If clothing becomes saturated with Portland cement, it should be removed and replaced with clean dry clothing. Begin each day by wearing clean clothing and conclude the day with a bath or shower.
Typical physical and chemical properties are given below. Consult the Supplier in Section 1 for additional data.

- Physical state: solid
- Appearance: gray or white powder
- Odor: odorless
- Odor threshold: not determined
- Specific Gravity: 2.3 – 3.1
- Flammability: not flammable
- Flash point °C (°F) [method]: not combustible
- Flammable limits (approx. Volume % in air) – LEL: not applicable UEL: not applicable
- Autoignition temperature °C (°F): not applicable
- Boiling point/range °C (°F): > 1000°C (1832°F)
- Melting point: > 1000°C (1832°F)
- Decomposition temperature: not determined
- Vapor density @ 101 kPa (air=1): not applicable
- Evaporation rate (n-butyl acetate =1): not applicable
- pH: 12-13
- Log POw (n-Octanol/water partition coefficient): not applicable
- Solubility in water: slightly soluble (0.1-1.0%)

SECTION 10 STABILITY AND REACTIVITY

STABILITY: Stable. Keep dry until used/
Reacts slowly with water forming hardened hydrated compounds, releasing heat and producing a strong alkaline solution.

INCOMPATIBILITIES:
Portland cement is highly alkaline and will react with acids to produce a violent, heat-generating reaction. Toxic gases or vapors may be given off depending on the acid involved. Reacts with acids, aluminum metals and ammonium salts. Aluminum powder and other alkali and alkaline earth elements will react in wet mortar or concrete, liberating hydrogen gas.

Limestone ignites on contact with fluorine and is incompatible with acids, alum, ammonium salts, and magnesium. Silica reacts violently with powerful oxidizing agents such as fluorine, boron trifluoride, chlorine trifluoride, manganese trifluoride, and oxygen difluoride yielding possible fire and/or explosions. Silicates dissolve readily in hydrofluoric acid producing a corrosive gas – silicon tetrafluoride.

HAZARDOUS DECOMPOSITION PRODUCTS: None known.

HAZARDOUS POLYMERIZATION: Not known to polymerize.

SECTION 11 TOXICOLOGICAL INFORMATION
ACUTE TOXICITY
Portland cement LD<sub>50</sub> / LC<sub>50</sub> – not available

CARCINOGENICITY
A: General Product Information
   The Occupational Safety and Health Administration (OSHA), the National
   Toxicology Program (NTP) and the International Agency for Research on Cancer
   (IARC) have not listed Portland cement as a carcinogen.
B: Component Carcinogenicity

CHRONIC TOXICITY
   Crystalline silica is considered a hazard by inhalation. IARC has classified
   crystalline silica as a Group 1 substance, carcinogenic to humans. This
   classification is based on the findings of laboratory animal studies (inhalation and
   implantation) and epidemiology studies that were considered sufficient for
   carcinogenicity. Excessive exposure to crystalline silica can cause silicosis, a
   non-cancerous lung disease.

SECTION 12 ECOLOGICAL INFORMATION

ECOTOXICITY: Portland cement hardens with water or moisture and is not expected to
present unusual ecotoxicity risks. See Sections 9 and 10 for relevant physical and
chemical properties.

SECTION 13 DISPOSAL CONSIDERATIONS

DISPOSAL RECOMMENDATIONS: 
Dispose of waste materials only in accordance with applicable federal, state, and local
laws and regulations.

REGULATORY DISPOSAL INFORMATION: If Portland cement as supplied becomes
a waste, it does not meet the criteria of a hazardous waste as defined under the Resource

SECTION 14 TRANSPORT INFORMATION

LAND (DOT): Not regulated for land transport

LAND (Transport Canada / TDG): Not regulated for land transport

SEA (IMO / International Maritime Organization): Not regulated for sea transport
   according to IMO-regulations

AIR (IATA / International Air Transport Association): Not regulated for air transport

SECTION 15 REGULATORY INFORMATION
USA REGULATIONS:
TOXIC SUBSTANCES CONTROL ACT (TSCA)
Portland cements are considered to be statutory mixtures under TSCA. Cement, Portland, Chemicals [65997-15-1] is included on the TSCA Inventory.

CERCLA:
This product is not listed as a CERCLA hazardous substance.

SUPERFUND AMENDMENTS AND REAUTHORIZATION ACT (SARA) TITLE III Information:
SARA (302/304) EXTREMELY HAZARDOUS SUBSTANCES (40 CFR 355):
This product contains no “Extremely Hazardous Substances”.

SARA (311/312) REPORTABLE HAZARD CATEGORIES (40 CFR 370.21):
Immediate Hazard: Yes
Delayed Hazard:
Fire Hazard: No
Reactive Hazard: No
Pressure Hazard: No

SARA (313) TOXIC RELEASE INVENTORY (40 CFR 372.65):

FEDERAL HAZARDOUS SUBSTANCES ACT (FHSA):
Portland cement is a “hazardous substance” subject to statutes promulgated under the FHSA.

SECTION 16 OTHER INFORMATION

REVISION DATE:

REVISION INDICATOR: This version of the MSDS contains revisions in Sections:

ABBREVIATIONS:
ACGIH = American Conference of Governmental Industrial Hygienists
CAS = Chemical Abstract Service
CERCLA = Comprehensive Environmental Response, Compensation and Liability Act
CFR = Code of Federal Regulations
DOT = USA Department of Transportation
IARC = International Agency for Research on Cancer

DISCLAIMER:
While the information provided in this material safety data sheet is believed to provide a useful summary of the hazards of Portland cement as it is commonly used, the sheet cannot anticipate and provide all of the information that might be needed in every situation. Inexperienced product users should obtain proper training before using this product.

In particular, the data furnished in this sheet do not address hazards that may be posed by other materials mixed with Portland cement to produce Portland cement products. Users should review other relevant material safety data sheets before working with this portlands, for example, Portland cement concrete.

SELLER MAKES NO WARRANTY, EXPRESS OR IMPLIED, CONCERNING THE PRODUCT OR THE MERCHANTABILITY OR FITNESS THEREOF FOR ANY PURPOSE OR CONCERNING THE ACCURACY OF ANY INFORMATION PROVIDED BY ILLINOIS CEMENT COMPANY, except that the product shall conform to contracted specifications. The information provided herein was believed by Illinois Cement Company to be accurate at the time of preparation or prepared from sources believed to be reliable, but it is the responsibility of the user to investigate and understand other pertinent sources of information to comply with all laws and procedures applicable to the safe handling and use of product and to determine the suitability of the product for its intended use. Buyer’s exclusive remedy shall be for damages and no claim of any kind, whether as to product delivered or for non-delivery of product, and whether based on contract, breach of warranty, negligence, or otherwise shall be greater in amount than the purchase price of the quantity of product in respect of which damages are claimed. In no event shall Seller be liable for incidental or consequential damages, whether Buyer’s claim is based on contract, breach of warranty, negligence or otherwise.
